Papers by Keogh and collaborators that use SAX. (in random order) In [1] we show how to use SAX to find time series discords which are unusual time series. In [2] we consider a special case of SAX, which has an alphabet size of 2, and a word size equal to the raw data, and show that we can use this bit-level representation for a variety of data mining tasks.

Description. Apriori is a program to find association rules and frequent item sets (also closed and maximal as well as generators) with the Apriori algorithm [Agrawal and Srikant 1994], which carries out a breadth first

search on the subset lattice and determines the support of item sets by subset tests. This implementation is pretty fast as it uses a prefix tree to organize the counters for ...
