decision problems for equational pdf
Automated theorem proving (also known as ATP or automated deduction) is a subfield of automated reasoning and mathematical logic dealing with proving mathematical theorems by computer programs.Automated reasoning over mathematical proof was a major impetus for the development of computer science.

Branches of model theory. This article focuses on finitary first order model theory of infinite structures. Finite model theory, which concentrates on finite structures, diverges significantly from the study of infinite structures in both the problems studied and the techniques used.Model theory in higher-order logics or infinitary logics is hampered by the fact that completeness and ...
