For chemistry students and teachers: The tabular chart on the right is arranged by the discovery year. The oldest chemical element is Phosphorus and the newest element is Hassium. Please note that the elements do not show their natural relation towards each other as in the Periodic system.

The first discovery of a true element in historical time was that of phosphorus by Dr. Brand of Hamburg, in 1669. independently in isolating it shortly afterward. As in our atomic age, a delicate balance was made between the "light-giving" (desirable) and "heat- giving" (feared) powers of a discovery.

The discovery of new, all-carbon molecules known as fullerenes was the unexpected result of research into

particles found in space. Scientists in different fields collaborated on the research that led to this discovery. No one set out to discover fullerenes—they were observed by scientists alert enough to realize they were seeing something new.
