

### **dissociative identity disorder a pdf**

Dissociative identity disorder (DID), previously known as multiple personality disorder, is a mental disorder characterized by at least two distinct and relatively enduring personality states. There is often trouble remembering certain events, beyond what would be explained by ordinary forgetfulness. These states alternately show in a person's behavior; presentations, however, are variable.

### **Dissociative identity disorder - Wikipedia**

Dissociative Identity Disorder is caused by "overwhelming experiences, traumatic events, and/or abuse occurring in childhood", particularly when traumas begin before age 5. [4]:293, [1]:122 The child's repeated, overwhelming experiences usually occur alongside disturbed or disrupted attachment between the parent/caregiver and the child.

OSDD, Dissociative Identity Disorder and DDNOS<sup>1</sup>. The first example presentation of Other Specified Dissociative Disorder is very similar to the DSM-IV's first example of Dissociative Disorder Not Otherwise Specified (DDNOS).<sup>[1][6]</sup> Both these describe a form of complex dissociative disorder which is very similar to Dissociative Identity Disorder, but falls just short of meeting the criteria.

### **Other Specified Dissociative Disorder and DDNOS Types**

In psychology, dissociation is any of a wide array of experiences from mild detachment from immediate surroundings to more severe detachment from physical and emotional experiences. The major characteristic of all dissociative phenomena involves a detachment from reality, rather than a loss of reality as in psychosis.. Dissociation is commonly displayed on a continuum.
