The most common processing approach in the time or space domain is enhancement of the input signal through a method called filtering. Digital filtering generally consists of some linear transformation of a number of surrounding samples around the current sample of the input or output signal. There are various ways to characterize filters; for example:

### **Demystifying digital signal processing (DSP) programming**

A digital signal processor (DSP) is a specialized microprocessor (or a SIP block), with its architecture optimized for the operational needs of digital signal processing.. The goal of DSP is usually to measure, filter or compress continuous real-world analog signals. Most general-purpose microprocessors can also execute digital signal processing algorithms successfully, but may not be able to ...

TECHNOLOGY SHOWCASE. Innovatek Ltd and FIEA manage an extensive series of technology events each year for forestry and wood products companies. This page, the Technology Showcase, provides a selection of up to ten papers/presentations for each event (posted within six months of the event been run). These can be downloaded as a pdf for use by all Friday Offcuts readers.

DSP generation of Pink (1/f) Noise Looking at how to generate pink noise by two methods: 1 - A "pinking" filter for white noise. 2 - The Voss-McCartney algorithm of adding multiple white noise sources at lower and lower octaves.
