1.1 Introduction of optical and electrical spectrum analysis Electrical/optical (E/O) and optical/electrical (O/E) devices constitute a cascaded network as shown in Fig. 1.1. Four scattering parameters (S11, S12, S21 and S22) of the cascaded network can be easily obtained using a calibrated microwave vector network analyzer

A network analyzer is an instrument that measures the network parameters of electrical networks. Today, network analyzers commonly measure s-parameters because reflection and transmission of electrical networks are easy to measure at high frequencies, but there are other network parameter sets such as y-parameters, z-parameters, and h-parameters. ...

The spectrum analyzer hence becomes an excellent tool to monitor this noise and to keep them held at acceptable levels. Network Analyzer. Take note that these are not to be confused with network analyzers that are used in data network analysis. Network analyzers let users observe specifically, the network parameters in an electrical network.
